Lifetime stressors

View 7

ON THIS SCREEN

The users will check if they have ever had this Stressors.
Also if needed, they can add more stressors

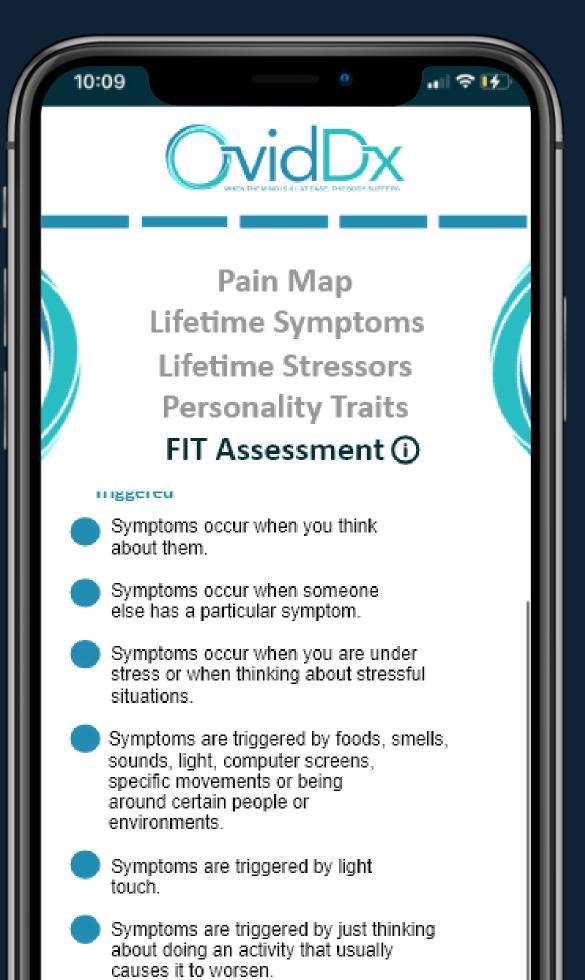

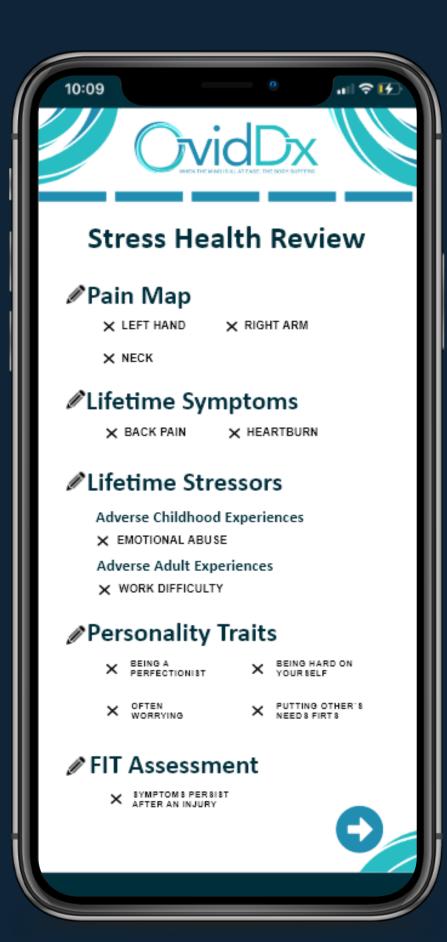

FIT Assessment

View 9

ON THIS SCREEN

The users will check if their pains or symptoms have any of these characteristics

Stress Health Review

View 10

ON THIS SCREEN

Here is the summary of all the assessment. Users can change the information with the pencils and deselct if needed

Selection of years

View 11 & 12

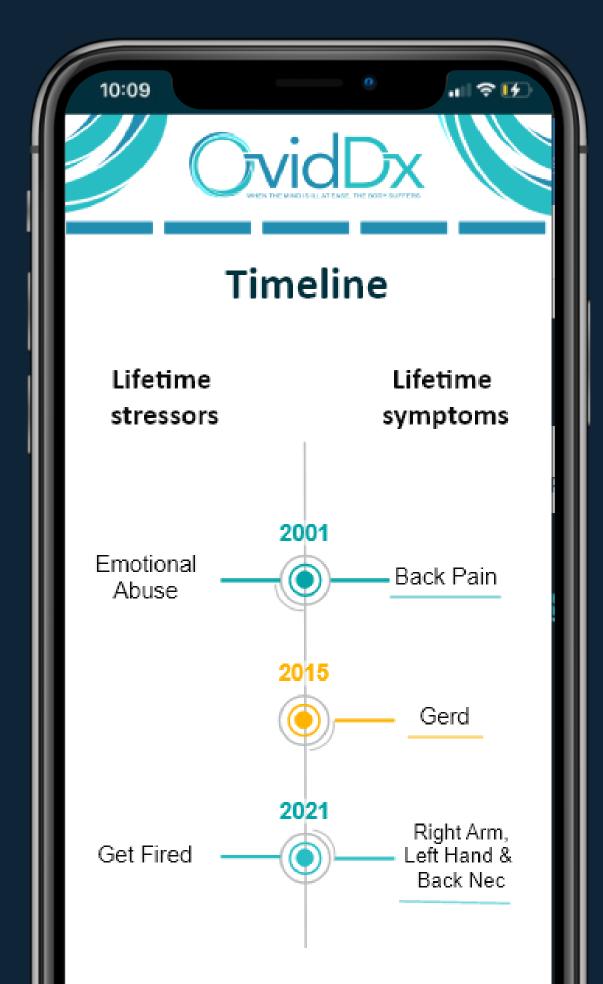

ON THIS SCREENS

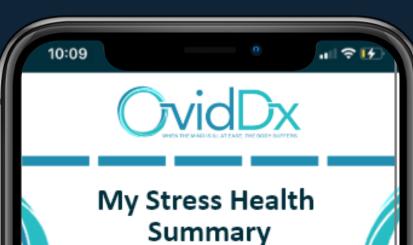

Depending on the information given before, the user will type the year when the symptoms and Stressors began

ON THIS SCREEN

The lifetime stressors and symptoms will be displayed on a Timeline

Sam Smith

Thank you for completing the OvidDx Health Assessment.

The goal of the assessment is to help you understand if any of your pain or other health conditions may be associated with life stress. Medical research has shown that our brains, when under stress, creates physical symptoms in the body.

You identified 3 areas of current pain in your body, including: left hand, right arm, and neck

You also reported a lifetime history of other physical symptoms and conditions, including: Back pain and heartburn

Medical research shows that the more areas of chronic pain and other chronic physical conditions a person has, the more likely it is that their brain has become sensitized to create pain. Don't worry though - the good news is that the brain can be retrained, and this vicious cycle can be broken.

You also reported 2 life stressors, including: Emotional abuse Work difficulty.

The latest medical research shows that people who have experienced a lot of stress in their lives are more likely to develop chronic pain and other adverse health conditions. It is not uncommon to have experienced a life stressor just prior to the onset of pain or to have the stressor contribute to any condition becoming chronic. This is how the brain and
